

Biofluids

As the age of personalized medicine advances, and new and specialized diagnostics become ever more important, so does the need for well characterized clinical specimens of blood, serum, plasma, synovial fluid, urine and other human biofluids. At Asterand, we offer services to procure and provide a diverse collection of biofluids for the identification of reliable biomarkers and relevant diagnostics.

EXTENSIVE HUMAN
TISSUE NETWORK

Blood/Serum/Plasma

- Pre-surgical blood draw
- Serum and plasma available with corresponding frozen and fixed tissues
- Collected under Asterand's IRB approved protocols
- Multiple disease states available (e.g. oncology, psoriasis, Alzheimer's disease)
- Well characterized samples provided with extensive clinical data and treatment history
- Age matched normal controls
- Custom collections available

Previous biofluids collections include

- Multiple sclerosis
- Alzheimer's disease
- Psoriasis
- Asthma and COPD
- Colorectal cancer
- Prostate cancer
- Lung cancer
- Breast cancer
- Diabetes

Additional biofluids

- Standard and custom collections available
- Protocols available for review and amenable to modification
- Surgical and/or post mortem donors
- Urine, synovial fluid, cerebro-spinal fluid, and other biofluids

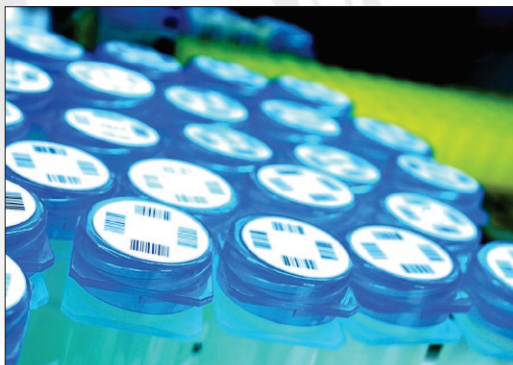

Save time and resources

- Asterand locates ideal clinical collection sites
- Asterand team members work on your behalf
- Eliminate red tape from your collection process
